Gprs/3g manual setting for smart and globe (Philippines)

To find this setting, select the Start button, then select Settings > Network & Internet > Cellular > Advanced options. Add an APN. The Internet access point name (APN) is the address your Windows 10 device uses to connect to the Internet when using your cellular data connection. Usually, the Internet APN is set automatically.

Cellular settings in Windows 10 - support.microsoft.com

The Access Point Name (APN) defines the network path for all cellular-data connectivity. Some carriers require you to enter your APN settings to set up your cellular service. You can only edit or view your APN on your iPhone and iPad if your carrier allows it. If you can't modify your APN settings, contact your carrier.
