INDUCTION MACHINES: AN INTRODUCTION 1.1. ELECTRIC ENERGY AND INDUCTION MOTORS The level of prosperity of a community is related to its capability to produce goods and services. But producing goods and services is strongly related to the use of energy in an intelligent way. Motion and temperature (heat) control are paramount in energy usage.

As shown in Chapter 2, the slots of the stator and rotor cores of induction machines are filled with electric conductors, insulated (in the stator) from cores, and connected in a certain way. This ensemble constitutes the windings. The primary (or the stator) slots contain a polyphase (threephase or two-phase) a.c. winding.
